

Motivated Computer Science student with a strong foundation in full-stack development, IoT, and system architecture. Experienced in building scalable applications using Python, Java, and C++, with a specialized focus on real-time data analysis and AI-driven systems. Proven ability to manage complex technical projects from conception to deployment, including real-time monitoring solutions and automated workflows.

ACADEMIC
PROJECTS/
FREELANCE
WORK

- Expense Tracker System**
Java Backend with Web Frontend
- Built a personal finance tracker that allowed users to log expenses and categorize spending.
 - Implemented a Java backend with a basic web frontend.
 - Applied CRUD operations and basic data persistence.
- University Portal**
Console-based using C++
- Developed a console-based university portal as part of academic coursework.
 - Features included student enrollment, course registration, and grade management.
 - Emphasized object-oriented programming and file handling.
- Optimal Routing System For Package Delivery**
Web-based App
- Designed a system to calculate optimal delivery routes.
 - Implemented algorithmic logic to determine optimal routes using shortest path techniques.
 - Good project to showcase logical/AI-based thinking.

EDUCATION

- University Of Modern Languages | 2022-2026**
Bachelors in Computer Science
- GPA: 3.4
- Group of Colleges | 2019-2021**
FSC in Pre-Engineering

SKILLS

- Languages & Tools:** C++, Java, Python, SQL, HTML, CSS, Git
- Frameworks & Tech:** Django, Bootstrap, Firebase, REST APIs, IoT
- Databases:** MySQL, Firebase Realtime DB, InfluxDB
- Other:** VS Code, Postman, Google Cloud, OOP, AI basics

CURRENT
LEARNING AND
EXPLORATIONS

- Final Year Project | FlowWise**
Designing a real-time IoT-based water leak detection system with AI-driven analysis. Utilizes Firebase, InfluxDB, and Google Cloud for scalable data collection and visualization. Strong focus on system architecture, automation, and practical deployment.
- Learning Blockchain Fundamentals**
Exploring cloud computing, security concepts, and blockchain technology including smart contracts, Ethereum, and DApps.
